

LIVIOUS ADVANCED BOT: TACTICAL GUIDE

Overview

The Advanced Bot is a high-performance Discord automation tool designed to link your game client with the Livius Tactical Overlay. It provides real-time combat tracking, database queries via Uncle ReCoN, and automatic report publishing to GitHub Pages.

1. One-Code Setup (/123)

Linking your desktop application to the Discord Bot is now automated:

1. In your Discord server, type '/123' in the channel where you want reports posted.
2. The bot will DM you a 6-digit secure code.
3. Open the LiviLogs app -> Options -> Advanced Bot Setup.
4. Enter the code and click 'LINK BOT'.
5. The app will automatically configure your Token and Channel ID using encrypted transport.

2. Tactical Commands

/rico <query>	Search Uncle ReCoN archives for Mobs, Items, or Stats.
/curate	List pending combat reports waiting for approval.
/curate approve <ID>	Validate a report and move it to official archives.
/123	Generate a setup code for the desktop application.

3. Tactical Overlay & Web Reports

The bot automatically generates interactive HTML reports after combat encounters. These reports feature:

- Dynamic DPS/HPS Charts (Tailwind & DaisyUI)
- Loot Acquisition Tracking
- MVP Performance Metrics
- Uncle ReCoN Stat Injections

4. Technical Specifications

- Runtime: Python 3.12+ / Discord.py
- Database: Uncle ReCoN v12 (RAM-cached SQLite)
- Encryption: Fernet (AES-128) for token transport
- Web API: Port 8081 (Local Verification Relay)
- Integration: GitHub API v3 for Web Hosting
